## Terms & Conditions

Stowe recommends hiring a licensed electrician to install your charging station. When consulting with the electrician, some questions to ask:

- Do I need to upgrade my electrical service?
- Do I need to bring underground electrical service and conduit to the location?
- Will there be other make ready work to prepare the location for charging stations?
- Is ventilation required (if within a parking garage or structure)?
- What's the charging level (level 2 or level 3)?
- How much does installation cost?
- What is the quality of cellular service at the location?
- When will it be complete?

Stowe recommends the following standards:

- Adding dedicated safety or security lighting
- Adding dedicated parking spots that are lined and only available for electric vehicles
- Keeping station access free from ice, snow, and other debris

Level 2 (240 volts)

- increases the charge power two to four times and decreases the typical full charge time for a battery electric vehicle to four to eight hours.
- Could require a new dedicated circuit from the electric panel to a wall location near the charging spot.
- Consult with a licensed electrician to verify that your building has the appropriate electrical service.

Stowe Electrical service requirements: check with Stowe staff regarding

- If the service meter needs to get relocated to improve service
- If the increased electrical load will require a transformer upgrade

This rebate is for the purchase of a qualifying Level 2 or Level 3 charging station installed at a service address of a Stowe Electric customer. The service address must be a commercial building or multi-family building. This offer is not available to residential Level 1 or Level 2 electrical vehicle charging infrastructure. This offer is limited to four Level 2 and/or Level 3 charging stations per customer.
